Eliminator

The Fundamentals of Sound.

Eliminator: The perfect Case Damping System

Step one, isolate your equipment from the base upon which it is standing. Step two, reduce vibrations within the base itself. With the Eliminator, we are going one final step further, dealing with another source of disruptive vibrations.

In principle, keeping a component's case quiet would seem to be a minor job. Unfortunately, the opposite is the case. Different components produce very different vibration frequencies. All of which have to be mercilessly eliminated. Which is exactly what the oscillation damping system within the aptly named Eliminator achieves. Even the smart, hand-polished steel casing is part of the system. And neither should the effect of the contact points between the equip-

ment case and the Eliminator system be underestimated. At these points, an optimal transmission of the vibrations to the Eliminator itself has to be ensured, meaning that this interface is of decisive importance.

The individual components of the Eliminator have been perfectly matched to ensure really all frequencies in question are considerably reduced.

Finally giving your precious and beloved components the chance to operate under optimal conditions. The result – peace within the machine – certainly justifies the effort.

Dimensions

| | |
|---------|--------|
| width: | 150mm |
| depth: | 100mm |
| height: | 25mm |
| weight: | 1.6 kg |
