The Fundamentals of Sound.

Silence: Discover the world of audiophile gel technology

High-quality Hifi devices are also highly sensitive to vibrations. The better the machine, the more it suffers. Be it component resonances, sound waves or subsonic noise – whatever goes into the system degrades the performance. Hence, the usual stands try to damp these resonances only by different materials.

We at THIXAR think the optimum set means absolutely no vibrations reach the device. So how do we achieve this? By an optimum decoupling of the device with our special gel technology based floating storage.

With the THIXAR Silence you'll get a complete separation of the top and the underside of the stand with no firm connection between both parts. This results in a quieter, wider soundstage, clearer and more natural sounding instruments – and an amazing amount of peace filling the heart of the proud owner.

Isn't that what the aviation-industry-grade measures and technologies we've used together with good old handicraft should all be about?

Usable area

size:	M	L
width:	450mm	500mm
depth:	360mm	440mm

Set surface

size:	M	L
width:	350mm	400mm
depth:	260mm	340mm
height:	42mm	50mm
weight:	5.2kg	8.2kg

Custom dimensions, forms and colors are available on request.
